We will start with a review of the challenges that are to be faced to develop Sustainable Habitat, which goes well beyond energy efficiency. In particular, we will present the Saint-Gobain Multi Comfort concept which is about building and renovating homes, offices, schools, hospitals and other buildings in a way that provides people with improved comfort and e.g. task effectiveness, health and wellbeing whilst also protecting the environment. The consequences on the need for innovation in building materials, products, solutions and evaluation methods will be exemplified.
