The global power system is in the midst of a grand transformation. The world is transitioning from an electricity system based primarily upon large, centralized generation, transmission and distribution (T&D) technologies, to one that also embraces distributed, digitally-enhanced, and low-carbon technologies. Traditional and emerging, physical and digital, large and small, are all converging to create a new twenty-first century power network. GE is leading this transformation and co-creating the future of energy with our customers across the globe. GE Renewable Energy is a \$10 billion start-up that brings together one of the broadest product and service portfolios of the renewable energy industry. Combining onshore and offshore wind, hydro and innovative technologies such as concentrated solar power and more recently turbine blades, GE Renewable Energy has installed more than 400 gigawatts capacity globally to make the world work better and cleaner. With more than 22,000 employees present in more than 55 countries, GE Renewable Energy is backed by the resources of the world's first digital industrial company. Our goal is to demonstrate to the rest of the world that nobody should ever have to choose between affordable, reliable, and sustainable energy.
