We will face, in the next few years, a climate and energy transition that will transform significantly our ways of life. We cannot detail with precision all the aspects of this transition yet. They may be mainly physical, societal, economic or whatever, but there is no real question whether such a transition will take place or not.

So the main questions are: what kind of transition do we want, why don't we go faster given the urgency of the situation, and how could we accelerate the pace?

During his successive experiences in public institutions, in an oil & gas company and in a consulting firm, Sébastien Soleille has met many different stakeholders, with various standpoints and actions regarding climate and energy. He will share his experience to provide insights on current opportunities and barriers linked to energy transition in our economy and society.
